Step 2 - Multimedia User

Recommended Specification

Multi-media users require a powerful media player with a decent sized screen and a large amount of memory. Specialist video playing units are termed MP4's which refer to a video format known as MPEG4. Despite the terminology, these units do play a broad range of files formats.

Multi-media players cross over between MP3 players (such as the latest Apple i-Pods featuring 2.5 inch screens) and MP4 players that feature larger screen sizes for improved video viewing. The large screen models consume more power than their smaller counterparts.

These multi-media units therefore use high capacity batteries made from Lithium Polymer that are charged via USB cables connected to computers. Many units also have mains powered docking stations that allow the player to operate whilst the batteries are being recharged.
